

Jerry Xu

Bellevue, WA | jxu000@gmail.com | jxu093.github.io

SUMMARY

Senior Software Engineer with 9+ years building distributed systems and backend services at scale. Currently on Azure's networking control plane, leading multi-team redesigns that improve provisioning performance and reliability.

PROFESSIONAL EXPERIENCE

Microsoft | Azure SDN Control Plane

2019 – Present

Software Engineer → Software Engineer II (2020) → Senior Software Engineer (2022)

- Led several SDN control-plane workstreams in a multi-year, multi-team rebuild of Azure's VM provisioning, deprecating the legacy regional network management service and moving goal-state delivery to a pub/sub model. Reduced provisioning tail latency by ~90%.
- Drove cross-organizational design of a new VM deletion API with Azure Compute, eliminating recurring resource-conflict incidents and modernizing the contract from legacy PaaS to IaaS.
- Redesigned goal-state distribution to route publish calls to each VM's home availability zone, reducing cross-AZ traffic by 66–75% and improving resilience during zone-level pub/sub outages.
- Built a proactive error-triage workflow to surface low-frequency failures below alerting thresholds, evolving it from manual review to AI-driven classification and uncovering previously undetected production issues.
- Led response to major production incidents, diagnosing and mitigating in real time, authoring root-cause analyses, presenting findings to senior leadership, and driving cross-team code and process fixes.
- Onboarded a new 6-person engineering team in India through structured weekly sessions, code reviews, and mentoring, enabling independent contributions within two months. The team has since grown and taken on overnight on-call coverage.

Capital One Canada | Software Developer

2018

- Designed and prototyped real-time, event-driven Apache Kafka data streams for financial ledger updates, architected for zero data loss across ~2M Canadian cardholders.

IBM | Software Developer

2017 – 2018

- Built and maintained backend services in Java/C++, focusing on enterprise-scale data processing, storage reliability, and security practices, including OWASP principles and GDPR compliance.

EDUCATION

McMaster University | Bachelor of Science in Computer Science, Minor in Business

2017

Dean's Honor List

TECHNICAL SKILLS

Languages: C#, Java, Python

Backend & Distributed Systems: API design, system design, scalability, microservices, REST APIs, gRPC, pub/sub, Protobuf, Apache Kafka, event-driven architecture, concurrent programming, multithreading

Cloud & Infrastructure: Azure, AWS, Service Fabric, SDN

Testing & Quality: unit testing, integration testing, TDD, code review

Engineering Practices: CI/CD, design documents, on-call, incident response, mentoring, technical leadership, cross-functional collaboration

Tools: Git, GitHub
